Inspiring Solutions Through Innovation

Amnio F_{RT} is a flowable tissue allograft derived from human amniotic fluid.

Amnio F is a cryopreserved allograft derived from human amniotic fluid.

The Amniotic fluid-derived cells are obtained from the placental tissue of donors at the time of a live, full-term elective Cesarean birth.

Wound Healing Components

Amnio F is rich with the basic components necessary for tissue repair and wound healing. It contains collagen substrates, growth factors, amino acids, carbohydrates, and cytokines.

The wound healing elements found in **Amnio F** are known to facilitate migration and proliferation of cells to the site of injury and construct a natural scaffold on which new tissue growth can occur.^{(1-7)*}

Chorion-Free Allograft

Alliance Spine allografts do not contain chorion, which may reduce the risk of an adverse reaction in the patient.

Tissue Safety

Placental donors go through a rigorous pre-screening qualification and are tested according to FDA guidelines for infectious disease. Collection of the donor tissue is performed during a planned Cesarean section and processed in accordance with the standards and guidelines established by the American Association of Tissue Banks (AATB).

Benefits of amniotic fluid may include:

- A safe, natural covering for wounds
- Inhibiting influence on Inflammation
- Intended for topical application as a covering over wounds.
- Birth tissues are recovered during planned Cesarean sections and processed aseptically in a manner to preserve the graft's inherent properties.

Handling & Storage Guidelines

Amnio F and **Amnio F_{RT}** comes in an easy to use, liquid format. It is a non-invasive, surgical or in-office treatment applied topically or implanted at the area of concern.

Amnio F

- Store at -70 degrees C or colder. Thaw only prior to use.
- Allow product to thaw by standing at room temperature and apply directly to the injury, wound, or area of inflammation.
- See Instructions for Use for a more detailed description.

Amnio F is cryopreserved for safe, long-term storage and ease of handling.

Amnio F_{RT}

- Store at ambient temperature (59-86°F/15-30°C) until ready for use
- Provided as a sterile, ready to use, flowable graft with no thawing or preparation required
- Apply directly to the wound or area of inflammation
- See Instructions for Use for more details

Sizes

Amnio F (Cryopreserved)

AVI-5200	Amnio F Liquid Amnion	2.0mL
----------	-----------------------	-------

Amnio F_{RT}

PRO-04-005	Amnio F _{RT} Liquid Amnion	0.5mL
PRO-04-001	Amnio F _{RT} Liquid Amnion	1mL
PRO-04-002	Amnio F _{RT} Liquid Amnion	2mL
